1 Introduction

User Manual of Structure Financial Market Phase II Application is developed by Rensol Technologies (S) Pte. Ltd. for Cofco Intl. The users of Cofco Intl. can refer to this document for operating and using the above developed application to all its capabilities.

The document depicts each form of the application and explains in detail how to navigate and gives clear understanding of its functionality.

2 Overview of CFS Application

This web application has been built for COFCO International which is the overseas agriculture business platform for COFCO Corporation, China's largest food and Agriculture Company. It supplies agriculture products around the world through their globally integrated supply chain, originating from surplus producing regions to supply regions with high demand.

- **Application Overview**

CFS is a fully web based global financial management application which

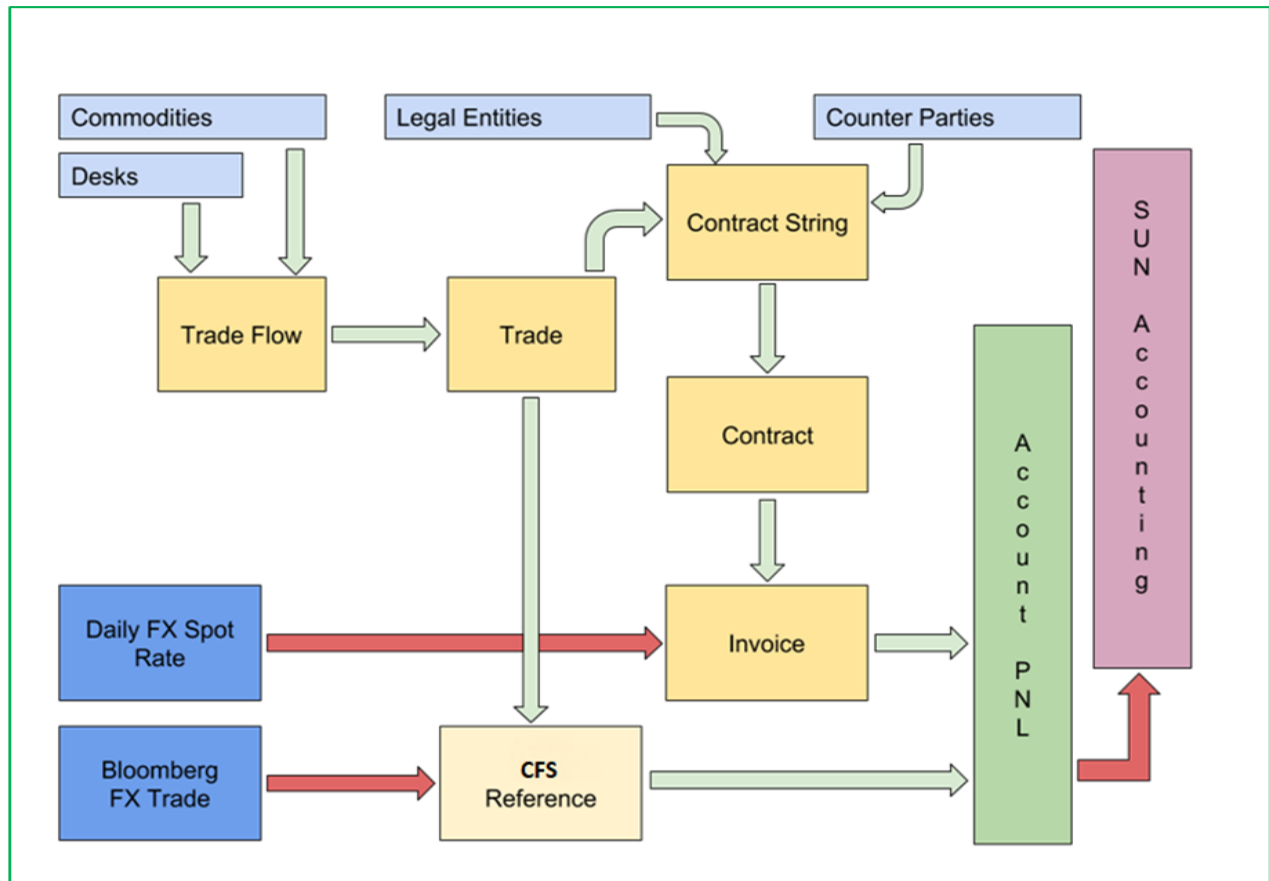

1. records and manages multi commodities & trades within the internal companies and outside
2. manages accounting operations such as Trade and Shipment Management, Invoice creation, Report Generation, Financial Accounting (SUN) Posting, Bloomberg Posting etc.
3. has been developed on Microsoft based technology i.e. ASP.NET, MVC and MS SQL server.

- **Application Details**

- Key benefits of CFS are

1. User friendly
2. Anytime changeable application with the ability for the solution to adapt to possible or future changes in its requirements.
3. Trade Creation with Multiple Trade Flow in various currencies
4. Use Daily Fx Rate, Creating Invoice with Amount Adjustment functionality
5. Takes care of multi-currency and price fluctuations into consideration.
6. Pushing various data in Accounting and posting in Financial Accounting (SUN).

- Overall Business Process Flow of CFS Application

Business Steps

Auto fetch daily FX rates from predefined location

Trade Flow Generation

Trade Generation

Contract String Generation

Contract Generation

Invoice Generation

Double entry of Invoice data in Trade PNL and Balance sheet

Invoice posting to SUN accounting

Auto fetch Bloomberg data form predefined location

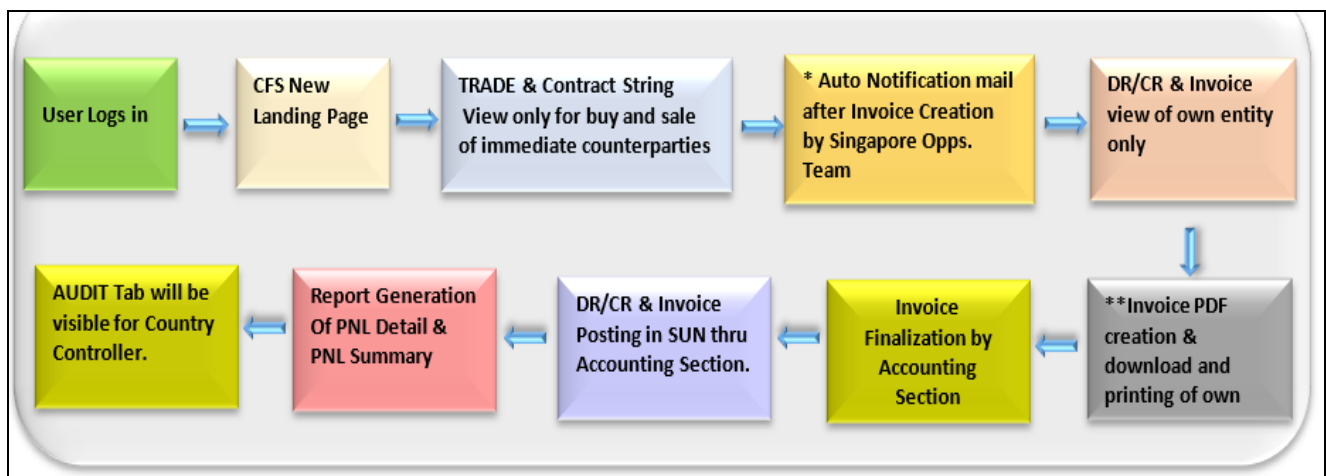

Bloomberg (FX) PNL and Balance sheet

Reports

Interfaces
Incoming Files 1. FX Rate Files 2. Bloomberg Files
Outgoing Feeds 1. Financial Accounting (SUN) Posting

Technology
Database :- SQL Server 2017
Language :- C#
Platform :- ASP.NET

- New Business Flow for the users of India (AAPL), UAE (Gemmayz), Rotterdam (CINVB) & Geneva (CRSA) only in this CFS Application

Note:

- All Create/Edit/Delete of Trade Flows, Trades, Contract Strings, Contracts, Invoices, DR/CR Notes will be executed only by the Singapore Operation Team for India (AAPL), UAE (Gemmayz), Rotterdam (CINVB) & Geneva (CRSA) entities which are in the scope of CFS Phase-II Implementation.
- * Once Invoice is generated by Singapore Ops. Team, a system generated auto-notification mail along with respective invoices as attachment will be sent to respective India (AAPL) / UAE (Gemmayz) / Rotterdam (CINVB) / Geneva (CRSA) entity's Accounting team with C.C. to Singapore Operation and Accounting Team from CFS_Notification@cofcointernational.com. Or Riyanka.Purkayastha@cofcointernational.com
- **The existing facility in CFS application of Invoice creation in PDF Format, download and printing of own entity only will also be there.

- iv. India (AAPL) / UAE (Gemmayz) / Rotterdam (CINVB) / Geneva (CRSA) users will do the Invoice Finalization & Posting along with their own DR/CR and Invoice once they receive a system generated auto-notification mail along with respective invoices as attachment. Users will also have the facility of reverse-posting if posting done wrongly.
- v. Following Menus, Modules and Sub-Modules will be visible for users of India (AAPL) / UAE (Gemmayz) / Rotterdam (CINVB) / Geneva (CRSA) to access, in this CFS Application.
 - a) **Operation**
 - a. Transaction
 - i. View Trade
 - b. Contract String
 - c. Contract
 - i. Contract List (only display)
 - ii. Search by Contract
 - d. Invoice
 - i. Invoice List
 - ii. View Invoice
 - e. Debit/Credit
 - i. Create / Show Dr Cr
 - ii. View Dr/Cr
 - b) **Accounting**
 - a. Trade Accounting for Sun Posting
 - c) **Reports**
 - a. Accounting Reports
 - i. PNL Detailed Report
 - ii. PNL Summary Report
 - d) **Documentation**
 - e) **Audit**
 - f) **Help**
 - a. User Manual

3 Login Screen

URL for UAT server: - <http://euwe01zuatsfm01/SFM>

URL for Production server: - <http://euwe01zprdsfm01/sfm>

The first screen of the application is the login page. The user is required to validate their credentials for authorizing their rights to use this application.

This is essential for the security of the software. Only authorized users are eligible to access the modules available in the application.

5 Masters

5.1 Country

Purpose: This form facilitates the creation of new Countries which will be stored in the database. So that the same can be used in forms like Desk, Shipment etc.

The user (with proper credentials), can also update and delete country from the master.

It has following fields:

1. **Country** – A meaningful name of a Country. It is a required field and only accepts alphabet up to 50 characters.
2. **Continent** – It is the continent in which the country belongs. It is a dropdown list and a required field.
3. **Status** – By default 'Active' - indicates that the country is visible in other forms. Disabling it will prevent the country from getting listed in lists.

Note:

1. Do not delete country record(s), if it is used anywhere in the application.

5.2 Legal Entity

Purpose: A new legal entity can be created in the system using this form, which will be used in other modules like origination, accounting etc.

A legal entity can be an association, corporation or individual which can participate in a trade and can be included in agreements or contracts.

Page 1 of 2 (14 Items) Page size: 10

It has following fields:

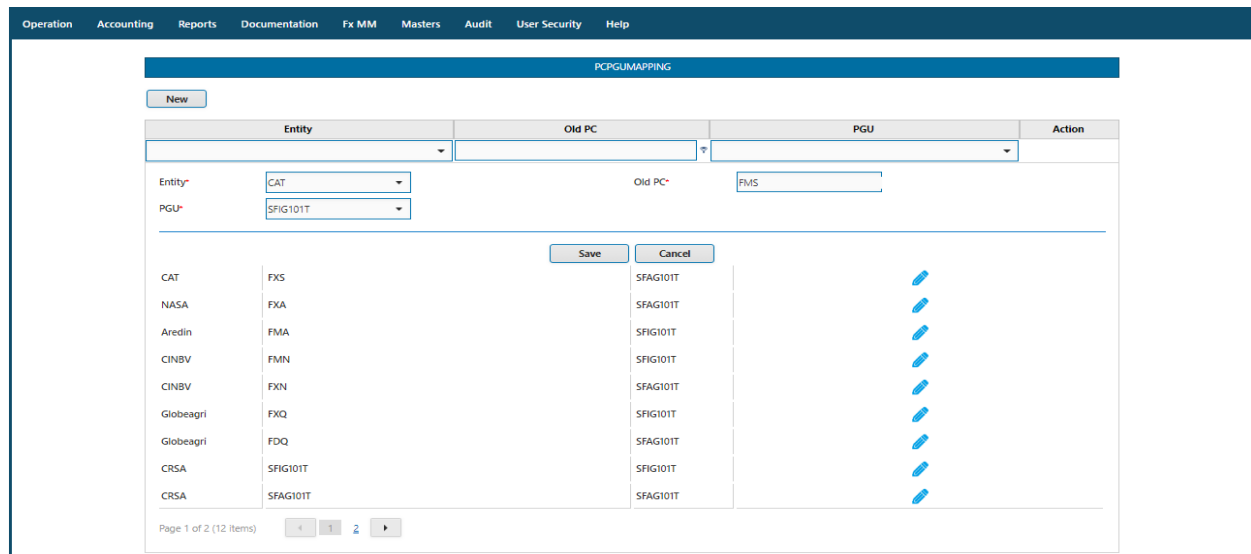

1. **Legal Entity** – A meaningful abbreviation for Legal Entity (Company). It is a required field and can accept up to 10 alphabets or spaces.
2. **Full Name** – The description of Legal Entity (Company). It is a required, alphanumeric field and allows up to 50 characters.
3. **Reg. Number** – It represents the associated registration number of the Legal Entity and it is an optional field.
4. **Intercompany Code** – The intercompany code is required to connect to other companies and is used in SUN accounting system. It is a required alphanumeric field and can accept up to 6 characters.
5. **SUN Entity Code** - The code by which SUN accounting system identifies an entity.
6. **Country** - Another part of the address and it is a required field. The country can be selected from a list of Countries.
7. **Status** – The status is 'Active' by default, i.e. the entity is visible in other modules.
8. **Business Location** – It represents the Business Location which allows alphanumeric character.
9. **Global BU** – It represents the Global Business Unit (area) of the Legal Entity and it allows alphanumeric characters.
10. **Regional BU** – It represents the Regional Business Unit (area) of the Legal Entity and it allows alphanumeric characters.

Note:

1. Do not delete Legal Entity record(s) if it is used anywhere in the application.
2. Legal Entity with Status as Inactive will not appear in any other form.

5.2.1. PC PGU Mapping:

Purpose: A Legal Entity may have one or more PGU. After expanding the entity from the list, option to add PGU(s) will be visible

The screenshot shows the PCPGUMAPPING application interface. At the top, there is a navigation bar with tabs: Operation, Accounting, Reports, Documentation, Fx MM, Masters, Audit, User Security, and Help. Below the navigation bar, there is a header bar with the title "PCPGUMAPPING".

The main interface contains a "New" button and a table with the following columns: Entity, Old PC, PGU, and Action. The table is currently empty, but it shows a list of entities and their corresponding PGUs. The entities listed are CAT, NASA, Aredin, CINBV, CINBV, Globeagri, Globeagri, CRSA, and CRSA. The PGUs listed are FXS, FXA, FMA, FMN, FXN, FXQ, FDQ, SFAG101T, and SFAG101T. The Action column contains a blue pencil icon for each row.

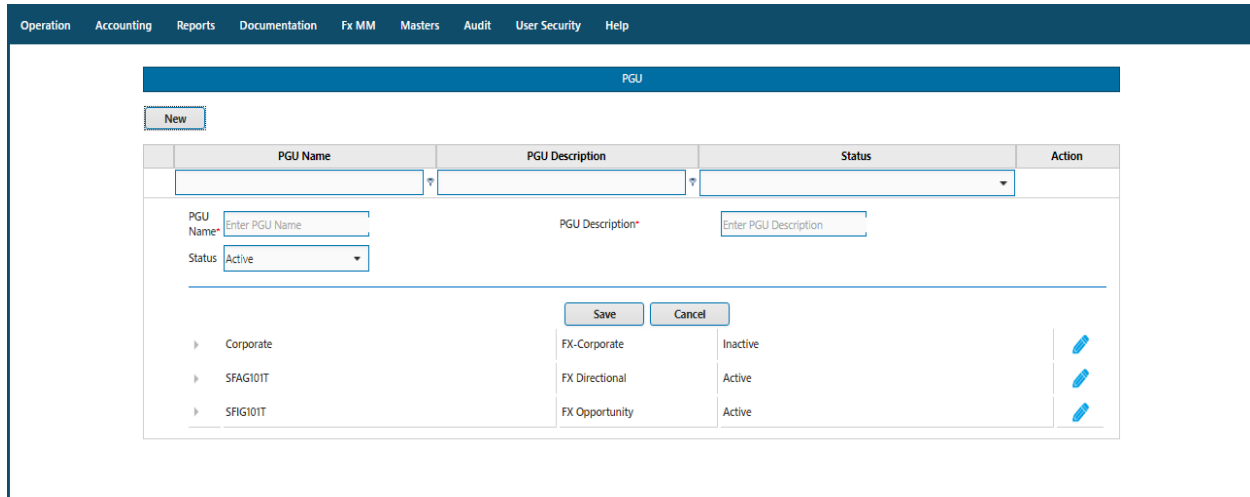

Below the table, there is a "Save" button and a "Cancel" button. At the bottom left, there is a page indicator: "Page 1 of 2 (12 items)".

It has following fields:

1. **Entity** – Name of the Legal Entity. It is a required field and only allows characters.
2. **Old PC** – Name of the PC (Profit Centre) which is associated and mapped with Bloomberg. It is a required field.
3. **PGU** – Name of the PGU (Profit Gain Unit) which is associated with Legal Entity.

5.3 PGU

Purpose: A PGU is a subunit of a company that is responsible for revenues and costs. A division of a company can also be called a PGU. The accounting section uses PGU to group the transaction and it is one of the fields which gets posted to SUN accounting system.

PGU Name	PGU Description	Status	Action
Corporate	FX-Corporate	Inactive	
SFAG10IT	FX Directional	Active	
SFIG10IT	FX Opportunity	Active	

It has following fields:

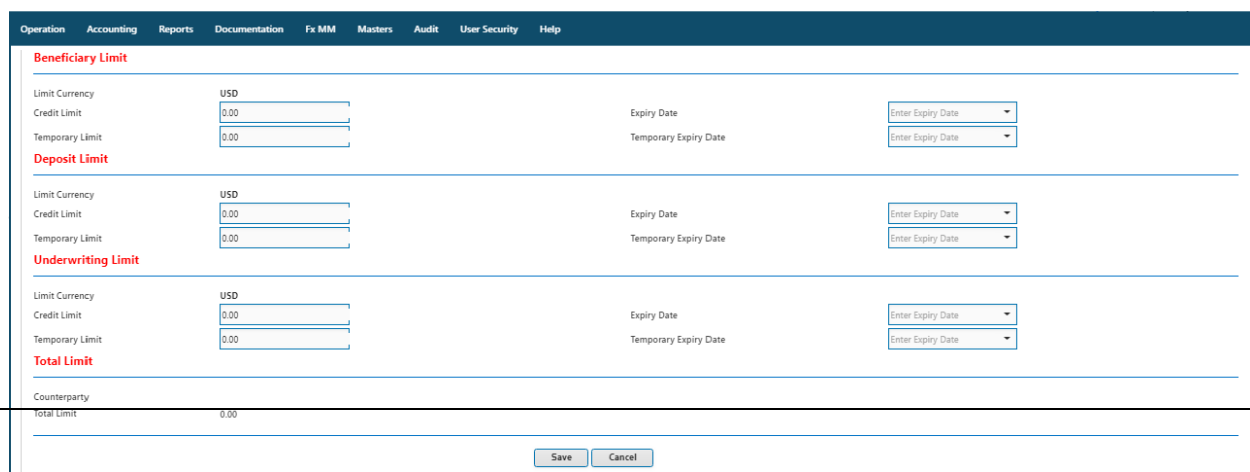

1. **PGU Name** – Name of the PGU. It is a required field and can allow up to 20 alphabets/space.
2. **PGU Description** – Description of the PGU. It is a required field and can allow up to 100 alphabets.
3. **Status** – The status is 'Active' by default, i.e. the PGU is visible in other modules.
- 4.

Note:

1. Do not delete PGU(s) if it is used anywhere in the application.
2. PGU with Status as Inactive will not appear in any other form.

5.4 Counterparty

Purpose: A counterparty is the other party that participates in a financial transaction. The counterparty is

Limit Currency	Credit Limit	Expiry Date	Temporary Limit	Temporary Expiry Date
USD	0.00	Enter Expiry Date	0.00	Enter Expiry Date
USD	0.00	Enter Expiry Date	0.00	Enter Expiry Date
USD	0.00	Enter Expiry Date	0.00	Enter Expiry Date

Counterparty: 0.00

Total Limit: 0.00

used in origination, accounting sections.

It has following fields:

1. **Counterparty Name** – Short name of the counterparty. It is a required field and can allow up to 20 alphabets/space.
2. **Counterparty Code** - It represents the SUN accounting code. It is an alphanumeric, **required field**.
3. **Full Name** – It is a required field and allows up to 50 alphabets/space.
4. **Status**– The status is 'Active' by default, i.e. the entity is visible in other modules.
5. **Reg. Number** – An optional field to input registration number of the counterparty.
6. **Address** – The address of Counterparty and it is a required field.
7. **City** – Part of the address, it is a mandatory field and allows up to 20 characters.
8. **Province** – Also a part of the address and it is a required field, which allows up to 20 characters.
9. **State** - Part of the address and it is a required field.
10. **Country** - Another part of the address and, is a required field. The country can be selected from a list of Countries.
11. **Pin code** – Also a part of the address and it is a required field. It allows only digits and requires 6 characters.
12. **Role** – A counterparty may have one or more roles, which can be selected from the dropdown list. It is a required field.
13. **Bank Type** - If the counterparty type is 'branch', user needs to select a branch from the dropdown list, which is just below the bank. It is an optional field.
14. **Limit** - It is a Boolean value which indicates whether Currency Limit for Counterparty is set or not. If the Limit is set to true, then User must specify below.
15. **Categories of Limits:**
 - i. **Beneficiary Limit**
 - ii. **Limit Currency**- It is in USD (permanently).
 - iii. **Credit Limit**- Total Beneficiary Credit Limit for specific Counterparty. It accepts only decimal value up to 14,2 precision.
 - iv. **Expiry Date**- Expiry date of the assigned credit limit. It is a required field.

- v. **Temporary Limit-** The total beneficiary credit limit for the specific counterparty. It accepts up to 14 digits and 2 decimals.
- vi. **Temporary Expiry Date-** Expiry date of given temporary credit limit. It is a required field and the date must be earlier than the expiry date.

16. Deposit Limit

- i. **Limit Currency-** It is in USD (permanently).
- ii. **Credit Limit-** Total deposit credit limit for specific counterparty. It accepts only decimal value up to 14,2 precision.
- iii. **Expiry Date-** Expiry date of given Credit Limit and it is a required field.
- iv. **Temporary Limit-** Total deposit temporary credit limit for the counterparty. It accepts only decimal value up to 14,2 precision.
- v. **Temporary Expiry Date-** Expiry date of given temporary credit limit. It is a required field and the date must be earlier than the expiry date.

17. Underwriting Limit

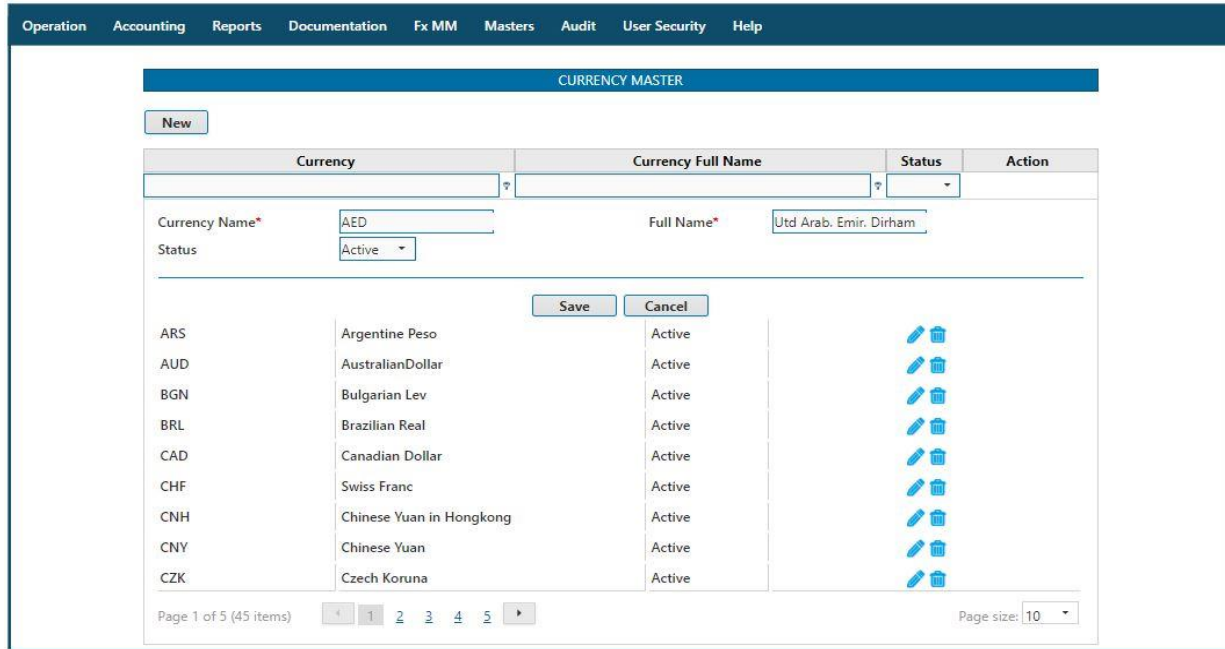

- i. **Limit Currency-** USD (permanent).
- ii. **Credit Limit-** Total Underwriting Credit Limit for specific Counterparty. It accepts only decimal value up to 14,2 precision.
- iii. **Expiry Date-** Expiry date of given Credit Limit. It is required once a value is fed into Credit Limit.
- iv. **Temporary Limit-** Total Underwritten Temporary Credit Limit for specific Counterparty. It accepts only decimal value up to 14,2 precision.
- v. **Temporary Expiry Date-** Expiry date of given temporary credit limit. It is a required field and the date must be set earlier than the expiry date.

Note:

1. Do not delete Counterparty record(s) if it is used anywhere in the application.
2. Counterparty with Status as Inactive will not appear in any form.

5.5 Currency

Purpose: The currencies which will be used for trade has to be created in the application using this form.

It has following fields:

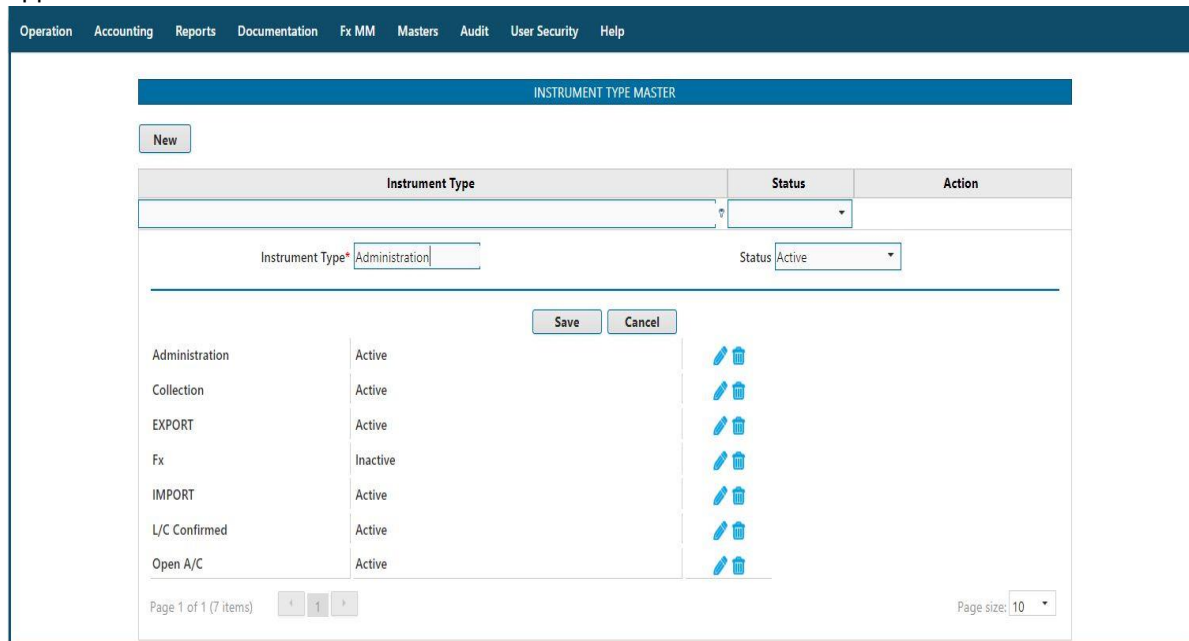

1. **Currency Name** – Short name of the Currency. It is a required field and it allows alphabets up to 3 characters.
2. **Full Name** – It is the full name of the currency. It is a required field and allows up to 50 alphabets / space / special character like space, (), \$.
3. **Status**- The status is 'Active' by default, i.e. the currency is visible in other modules.

Note:

1. Do not delete Currency record(s), if it is used anywhere in the application.
2. Currency with Status as Inactive will not appear in any form.

5.6 Instrument Type

Purpose: Using the form, different types of instruments can be added in the application.

Instrument Type	Status	Action
Administration	Active	 
Collection	Active	 
EXPORT	Active	 
Fx	Inactive	 
IMPORT	Active	 
L/C Confirmed	Active	 
Open A/C	Active	 

It has following fields:

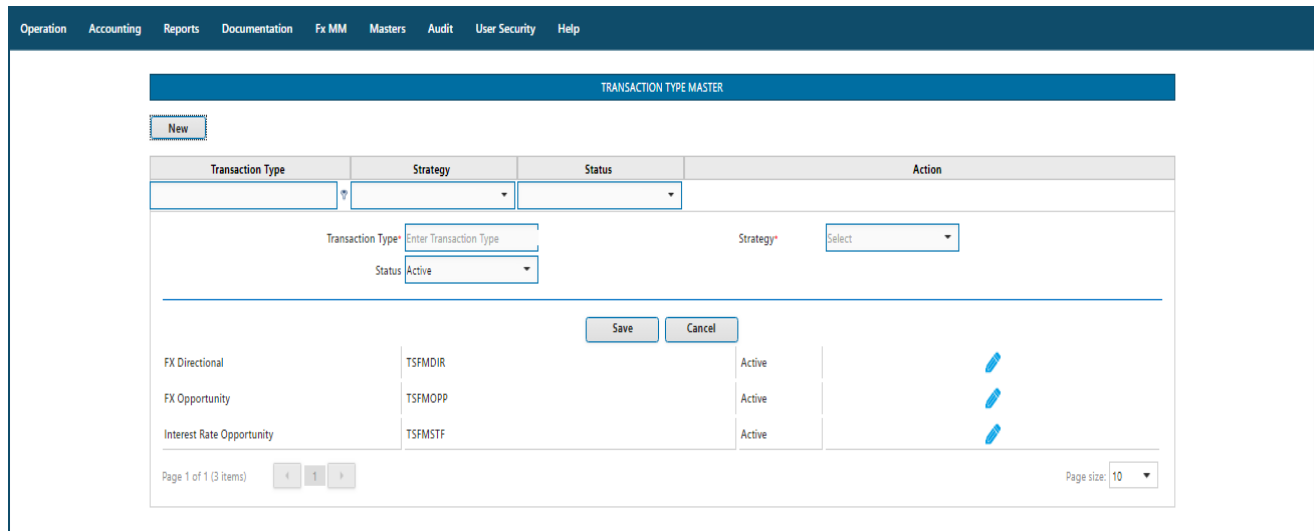

1. **Instrument Type** –It is a required field and allows only alphabets, space and special character like '/'. A maximum of 50 characters can be entered.
2. **Status**- The status is 'Active' by default, i.e. the instrument type is visible in other modules.

Note:

1. Do not delete Instrument Type record(s) if it is used anywhere in the application.
2. Instrument Type with Status as Inactive will not appear in any form.

5.7 Transaction Type

Purpose: Transaction types can be added using this form, which will be used in origination.

The screenshot shows the 'TRANSACTION TYPE MASTER' form. At the top, there is a 'New' button. Below it is a table with the following columns: 'Transaction Type', 'Strategy', 'Status', and 'Action'. The table is currently empty. Below the table, there are input fields for 'Transaction Type' (with a placeholder 'Enter Transaction Type'), 'Strategy' (with a dropdown menu), and 'Status' (with a dropdown menu set to 'Active'). There are 'Save' and 'Cancel' buttons. Below these buttons, there is a list of existing transaction types: 'FX Directional' with strategy 'TSFMDIR' and status 'Active', 'FX Opportunity' with strategy 'TSFMOPP' and status 'Active', and 'Interest Rate Opportunity' with strategy 'TSFMSTF' and status 'Active'. At the bottom, there is a 'Page size' dropdown set to '10' and a 'Page 1 of 1 (3 items)' indicator.

It has following fields:

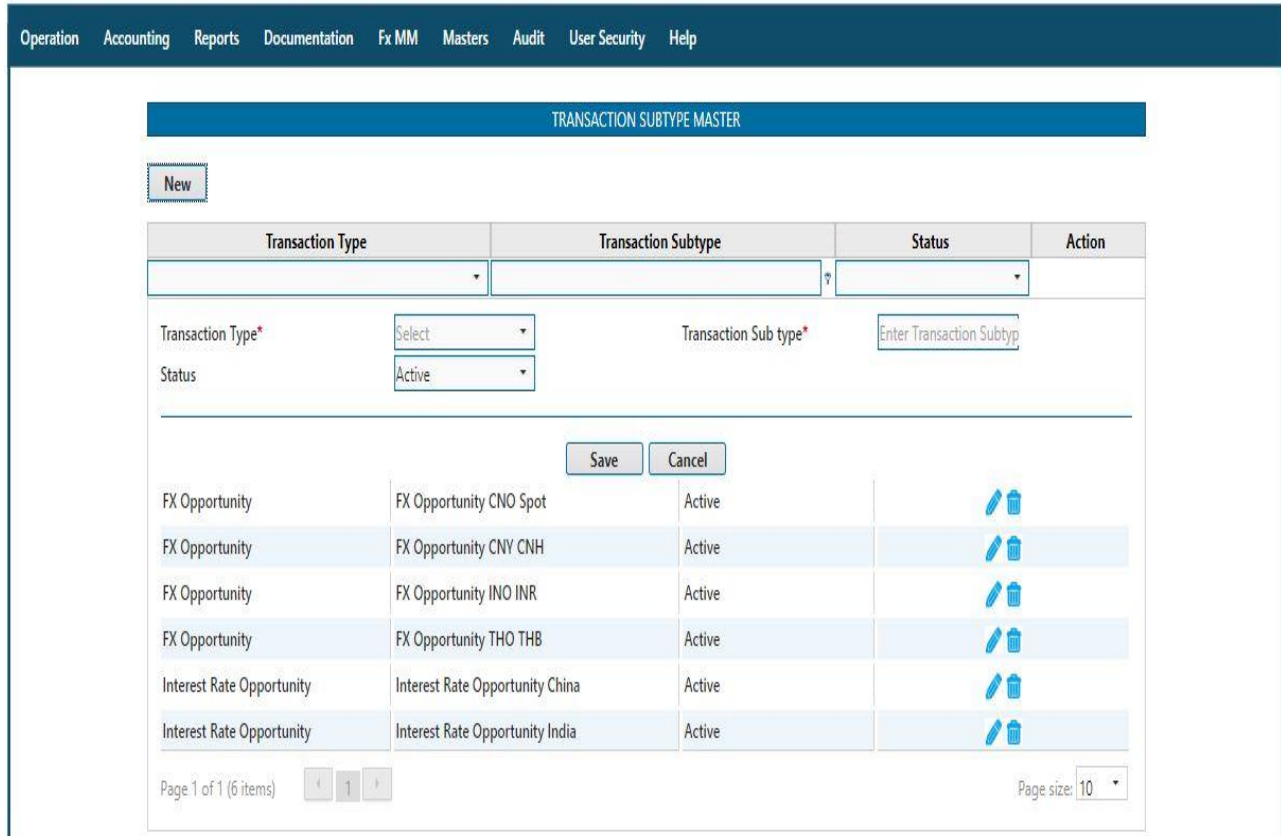

1. **Transaction Type** – Name of transaction type. It is a required field and can accept up to 50 alphabets / spaces.
2. **Strategy** – Name of the strategy type. It is a required field and accepts only characters.
3. **Status**- The status is 'Active' by default, i.e. the transaction type is visible in other modules.

Note:

1. Do not delete Transaction Type record(s) if it is used anywhere in the application.
2. Transaction Type with Status as Inactive will not appear in any form.

5.8 Transaction Subtype

Purpose: Like transactions, this form can be used to add transaction subtypes which can be used in the trade origination section.

Transaction Type	Transaction Subtype	Status	Action
Transaction Type*	Transaction Sub type*	Status	
FX Opportunity	FX Opportunity CNO Spot	Active	 
FX Opportunity	FX Opportunity CNY CNH	Active	 
FX Opportunity	FX Opportunity INO INR	Active	 
FX Opportunity	FX Opportunity THO THB	Active	 
Interest Rate Opportunity	Interest Rate Opportunity China	Active	 
Interest Rate Opportunity	Interest Rate Opportunity India	Active	 

It has 3 fields:

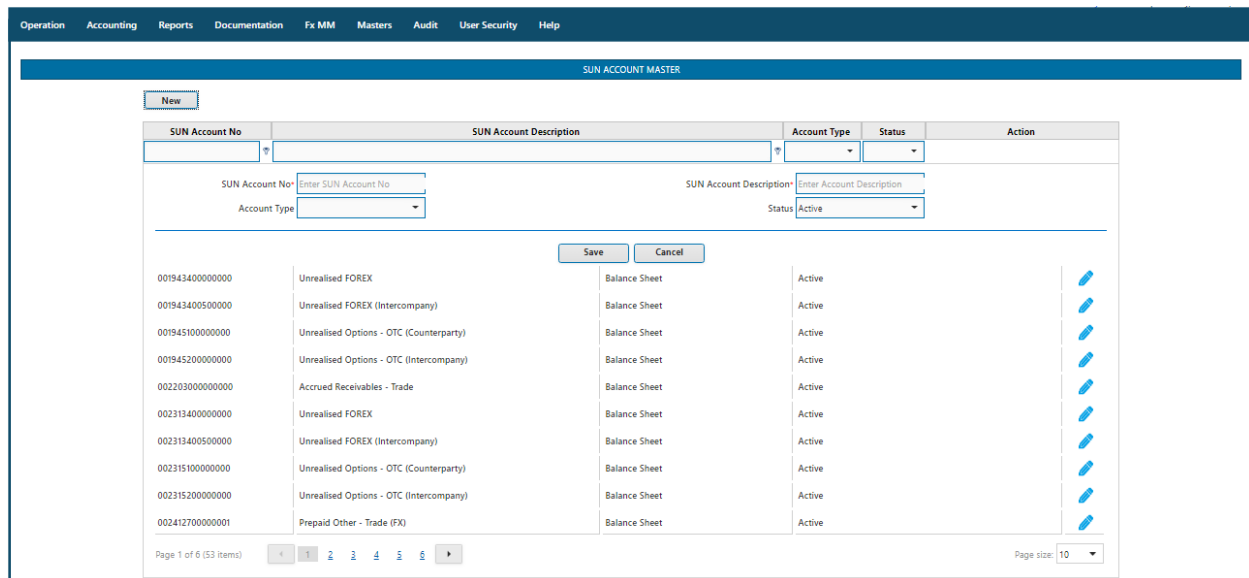

1. **Transaction Type** – Select the parent transaction type from the dropdown list.
2. **Transaction Subtype** – Name of transaction which will be treated as subtype. It is a required field and allows up to 50 alphabets/spaces.
4. **Status**- The status is 'Active' by default, i.e., the subtype is visible in other modules.

Note:

1. Do not delete Transaction Sub Type record(s) if it is used anywhere in the application.
2. Transaction Sub Type with Status as Inactive will not appear in any form.

5.9 SUN Account Codes

Purpose: Sun account codes are required for submission of transactions to SUN accounting systems. Using this data, the system will map the account numbers with the transactions.

SUN Account No	SUN Account Description	Account Type	Status	Action
00194340000000	Unrealised FOREX	Balance Sheet	Active	
00194340050000	Unrealised FOREX (Intercompany)	Balance Sheet	Active	
00194510000000	Unrealised Options - OTC (Counterparty)	Balance Sheet	Active	
00194520000000	Unrealised Options - OTC (Intercompany)	Balance Sheet	Active	
00220300000000	Accrued Receivables - Trade	Balance Sheet	Active	
00231340000000	Unrealised FOREX	Balance Sheet	Active	
00231340050000	Unrealised FOREX (Intercompany)	Balance Sheet	Active	
00231510000000	Unrealised Options - OTC (Counterparty)	Balance Sheet	Active	
00231520000000	Unrealised Options - OTC (Intercompany)	Balance Sheet	Active	
00241270000001	Prepaid Other - Trade (FX)	Balance Sheet	Active	

It has following fields:

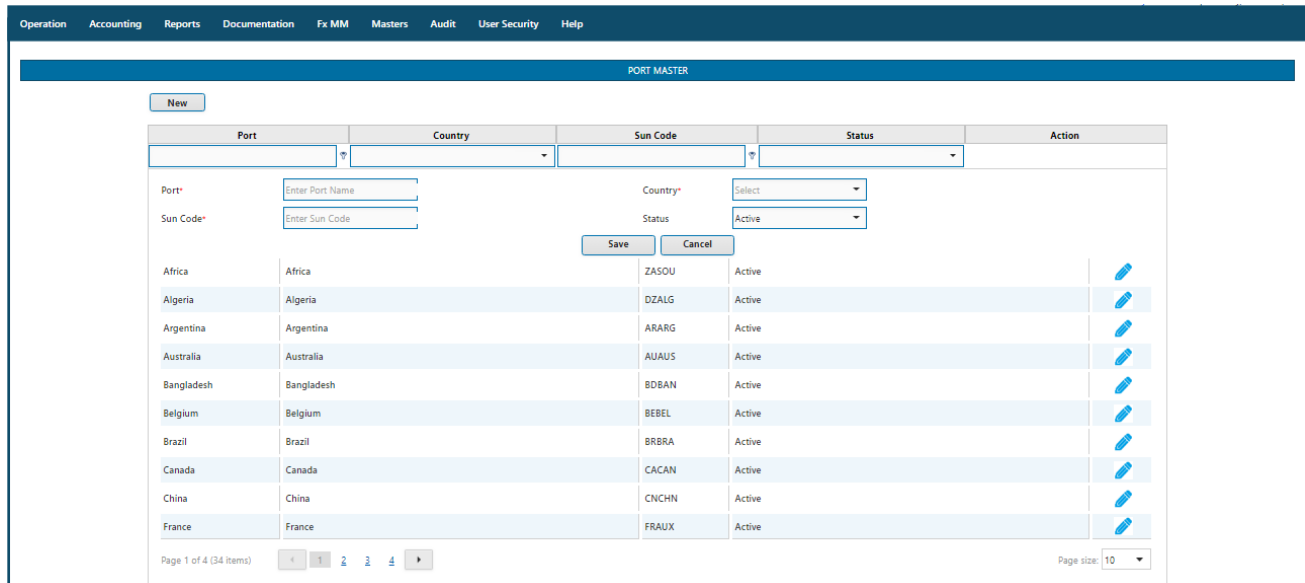

1. **SUN Account No** – The analysis code from SUN accounting system. It is a required field and can allows between 5-10 characters.
2. **SUN Account Description** – Describes what the code represents, i.e. commission, bank charges etc. It is a required field and allows up to 50 alphabets / space.
3. **Account Type** – PNL or Balance Sheet account.
4. **Status**- The status is 'Active' by default, i.e. the code is visible in other modules.

Note:

1. Do not delete SUN Account record(s) if it is used anywhere in the application.
2. SUN Account with Status as Inactive will not appear in any form.

5.10 Port

Purpose: In CFS application Trade flow, shipment, Contract String modules require ports in the origination and destination sections. This form can be used to add the ports to the application.

Port	Country	Sun Code	Status	Action
Africa	Africa	ZASOU	Active	
Algeria	Algeria	DZALG	Active	
Argentina	Argentina	ARARG	Active	
Australia	Australia	AUAUS	Active	
Bangladesh	Bangladesh	BDBAN	Active	
Belgium	Belgium	BEBEL	Active	
Brazil	Brazil	BRBRA	Active	
Canada	Canada	CACAN	Active	
China	China	CNCHN	Active	
France	France	FRAUX	Active	

It has following fields:

1. **Port** – Name of the port. It is a required field and allows only alphabets.
2. **Country** – The country where the port is located.
3. **Sun Code** – The Sun Code associated with the Port.
4. **Status**- The status is 'Active' by default, i.e. the port is visible in other modules.

Note:

1. Do not delete Port record(s) if it is used anywhere in the application.
2. Port field with Status as Inactive will not appear in any form.

5.11 Goods

Purpose: Goods are the commodities used in the trades. It is necessary to add the goods first in the application to use in other modules like trade flow, contract string etc.

Page size: 10

COFCO © 2018 All rights reserved. v1.0.18.1

It has following fields:

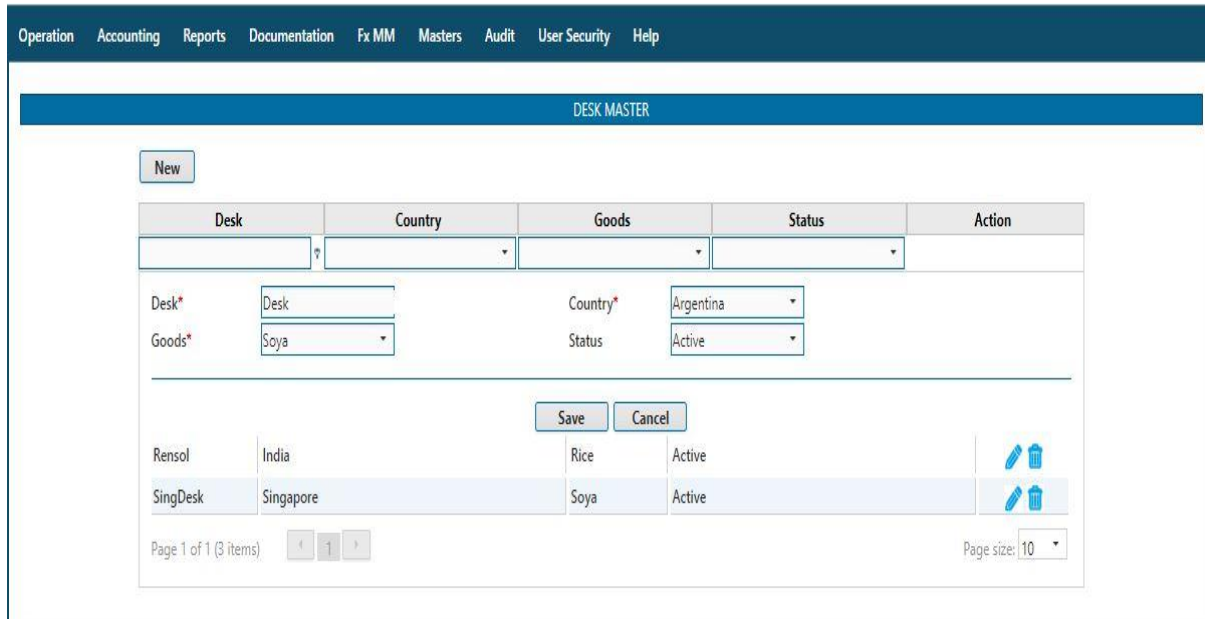

1. Goods Name – Name of the goods. It is a required field and allows only alphabets.
2. Goods Description – Description of the goods. It is a required field and allows only alphabets.
3. Sun Code – It is code which represent the Goods in the SUN.
4. Status- The status is 'Active' by default, i.e., the good is visible in other modules.

Note:

1. Do not delete Goods Name record(s) if it is used anywhere in the application.
2. Goods Name field with Status as Inactive will not appear in any form.

5.12 Desk

Purpose: A desk is the source of all/initial trading information. It represents information centres located in different countries.

Desk	Country	Goods	Status	Action
Desk*	Country*	Goods*	Status*	
Desk	Argentina	Soya	Active	
Rensol	India	Rice	Active	 
SingDesk	Singapore	Soya	Active	 

It has following fields:

1. **Desk** – Name of the desk, and it is a mandatory field.
2. **Country** – The country where the desk is located. It can be selected from the dropdown list.
3. **Goods** – Associated goods / commodities
4. **Status** – The status is 'Active' by default, i.e. the desk is visible in other modules.

Note:

1. Do not delete Desk record(s) if it is used anywhere in the application.
2. Goods Name field with Status as Inactive will not appear in any form.

5.13 TDS Rate

Purpose: Tax Deducted at Source (TDS) rate is a means of collecting income tax in India. Any payment covered under these provisions shall be paid after deducting a prescribed **percentage**.

Country	TDS Rate (%)	Year	Month	Action
China	1.00	2015	Jun	
Argentina	1.00	2015	Jun	
Singapore	1.00	2015	Jun	
Brazil	1.00	2015	Jun	
Belgium	1.00	2015	Jun	
Russia	1.00	2015	Jun	
Japan	1.00	2015	Jun	
The Netherlands	1.00	2015	Jun	
India	8.00	2016	Feb	

It has following fields:

1. **Country** – The country where the desk is located. It can be selected from the dropdown list.
2. **TDS rate** – It is the Tax Deducted at Source (TDS) rate. It is a means of collecting income tax.
3. **Year** – It is the year in which the TDS is applied.
4. **Month** – It is the month in which the TDS rate is applied.

Note:

1. Do not delete TDS record(s) if it is used anywhere in the application.

5.14 FX Rate Maintenance

Purpose: Foreign Exchange Rate (FX Rate) specifies the exchange rate w.r.t USD. It is automatically filled on the behalf of selected currency. It represents FX rate which is coming from the CSIL system.

FX RATE MAINTENANCE			
View Data			
Action	Currency	Date	Fx Rate

It has following fields:

- Company Name** – Need to select required entity name from dropdown for which beneficiary needs to be added.
- Currency** - Need to select required currency name from dropdown.
- Beneficiary Bank** – Bank name
- Beneficiary** – Beneficiary Name
- Swift Code** – Bank's swift code
- Account No.** – Beneficiary's Account No.

6 User Security

6.1 Role:

Purpose: Roles enable the administrator to group the users. Which also allows the administrator to assign access permission to multiple users in one go.

It has 3 fields:

1. **Role Name-** Name of the role for easy identification. It is a required field.
2. **Country-** For which country, the role is getting created. It is a required field.

3. **Status-** The status is 'Active' by default, i.e. the role is visible in other modules.

6.2 User:

Purpose: Any person requires access to the CFS application will require a credential for login. This form will allow the privileged user to create a new user in the application.

Page 1 of 2 (11 items)

Page size: 10

It has following Components:

1. **User Id-** Will be needed while logging in to the application. It is a required field and allows up to 50 alphanumeric characters.
2. **Username:** Real name of user which will be used for display purpose only. It is a required field and allows up to 50 alphabets.
3. **Email ID:** email Id of the user. It is a required field and allows only valid email addresses.

4. **Password:** Will be needed while logging in to the application. It is a required field and allows up to 50 alphanumeric characters.
5. **Confirm Password:** Will be needed while logging in to the application. It is a required field and allows up to 50 alphanumeric characters.
6. **Status:** The status is 'Active' by default, i.e. the user is visible in other modules and can login.
7. **Country:** Name of country the user will have access to. It is a mandatory field.
8. **Role:** It is the designation of the user in the organisation. Only the roles for the corresponding country will get display to get a role selected.

6.3 Access Control:

Purpose: Assign access levels to a role. When a user logs in, the application will control the access to different Menu, Sub-Menu, Form & Module based on this access control data.

The screen had been designed in such a way that the Global Controller can give any access (Insert / Update / Delete / View) at any point of time to any role at Menu, Sub-Menu, Form & Module level.

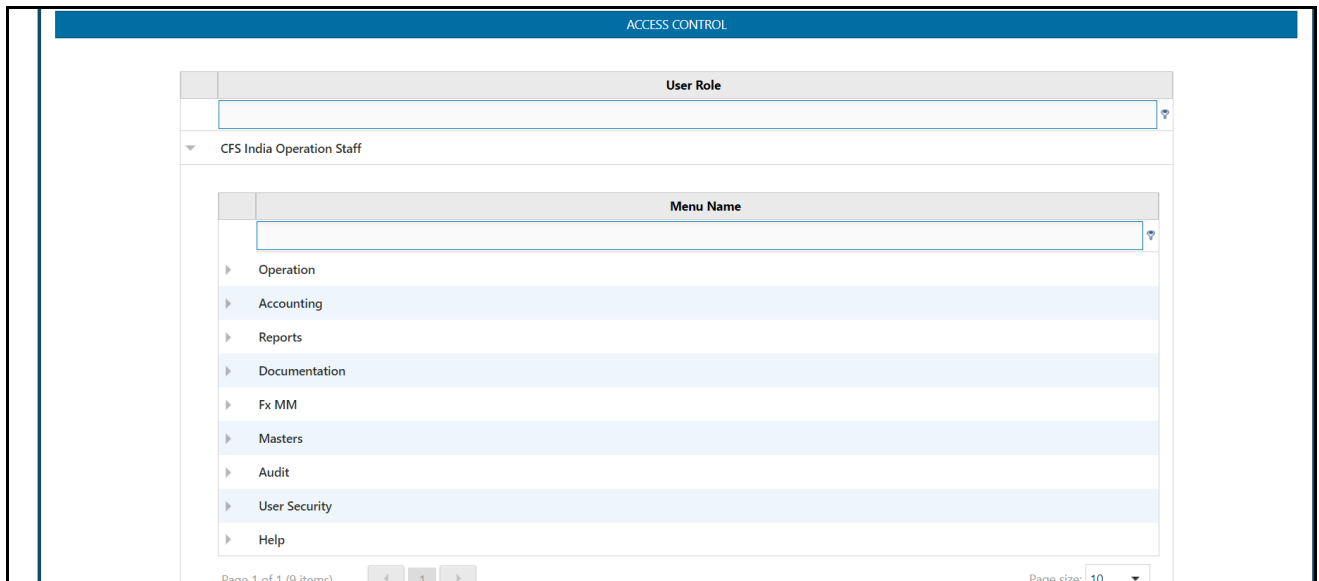

1. After opening the Access Control Page, list of user roles will be visible.

ACCESS CONTROL	
	User Role
▶	CFS Accounting Staff
▶	CFS Global Controller
▶	CFS Operation Staff
▶	CFS Administrator
▶	CFS Operation Head
▶	CFS Structuring Head
▶	CFS Country Controller
▶	CFS Report Reviewer
▶	CFS IT Administrator
▶	CFS India Accounting Staff
▶	CFS India Operation Staff
▶	CFS India Country Controller

- i. There is existing 9 Roles which are for Singapore.
 - a. CFS Accounting Staff
 - b. CFS Global Controller
 - c. CFS Operation Staff
 - d. CFS Administrator
 - e. CFS Operation Head

- f. CFS Structuring Head
- g. CFS Country Controller
- h. CFS Report Reviewer
- i. CFS IT Administrator.
- ii. Except Singapore, for each entity, there are 3 roles (Accounting Staff, Operation Staff, Country Controller).
 - A. for India (AAPL)
 - a. CFS India Accounting Staff
 - b. CFS India Operation Staff
 - c. CFS India Country Controller
 - B. for UAE (Gemmayz)
 - a. CFS UAE Accounting Staff
 - b. CFS UAE Operation Staff
 - c. CFS UAE Country Controller
 - C. for Holland (Rotterdam-CINVB)
 - a. CFS Holland Accounting Staff
 - b. CFS Holland Operation Staff
 - c. CFS Holland Country Controller
 - D. for Switzerland (Geneva-CRSA)
 - a. CFS Switzerland Accounting Staff
 - b. CFS Switzerland Operation Staff
 - c. CFS Switzerland Country Controller

2. After expanding any role (say CFS India Accounting Staff role), the below mentioned screen will be visible where it will display all the Menu Names. Here Controller will give the access.

The screenshot shows the 'ACCESS CONTROL' interface. At the top, there is a 'User Role' dropdown menu. Below it, the selected role 'CFS India Operation Staff' is shown. Underneath, there is a 'Menu Name' dropdown menu. The 'Menu Name' dropdown is expanded, displaying a list of menu items: Operation, Accounting, Reports, Documentation, Fx MM, Masters, Audit, User Security, and Help. At the bottom of the screen, there is a pagination bar showing 'Page 1 of 1 (9 items)' and a 'Page size' dropdown set to 10.

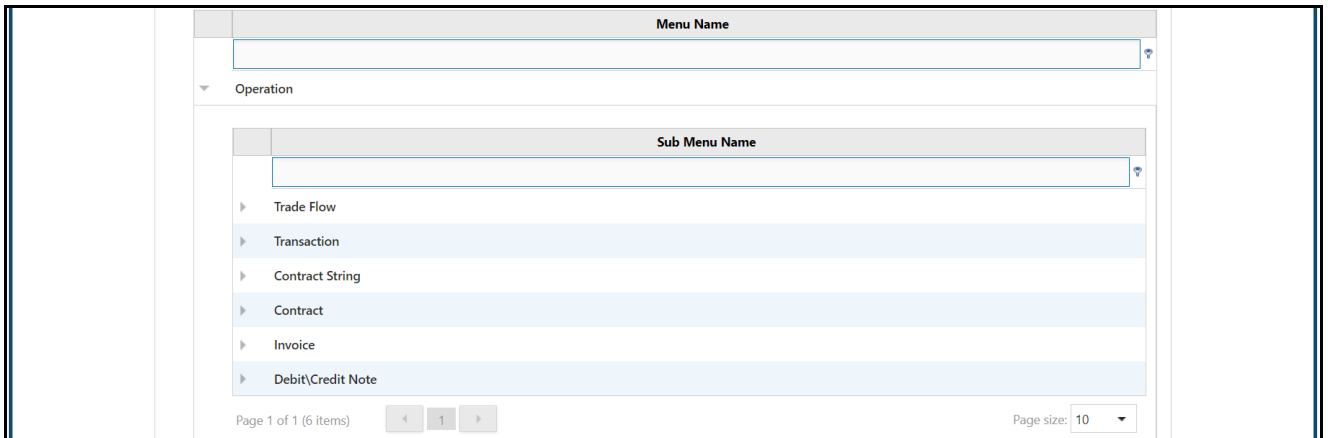

3. After expanding each Menu, there will be Sub-Menu, then under Sub-Menu, there will be Form and then under Form, there will be Module if applicable.
Global Controller will give the access as per requirement to the respective role.

There are Insert, Update, Delete & View checkboxes in all Sub-Menu, Form & Module. Checking the respective box will allow the access for the corresponding Sub-Menu, Form & Module for that role in CFS Application.

NOTE:

- In case, where sub-menu itself is a Form, it will directly open the Form tab instead of opening the Sub-menu for giving the required access.
- In case, where there is Module under Form, then
 - Firstly, need to give the required access on Insert, Update, Delete & View checkbox at Form level.
 - Then click on “Save Changes” to update in database.
 - Once it is saved, expand the Form, and then give the required access on Insert, Update, Delete & View checkbox at Module level.
 - In Module, the corresponding checkbox will be enabled only for which the permission had been given at Form level and rest checkboxes will be disabled.
 - Then click on “Save Changes” to update in database.
- Before clicking on “Save Changes”, if user wants to undo the changes, then user need to click on “Cancel Changes”.

TF-19154	Oilseeds Geneva	Olivia R	Wong Yook Shan	
TF-19153	Grains Singapore	Good Luck	Wong Yook Shan	

It has following components:

Trade_Flow_No: It is generated against every Desk. This is a unique and auto generated field. User can not modify this Trade_Flow_No.

Desk: In this field select the desk name from the dropdown and data comes from the desk master. This is a mandatory field.

Vessel: It is the place where goods are loaded. This is a mandatory field and allows up to 25 characters and space.

After Clicking on left hand side arrow button for Trade_Flow_No. user can open the form. Against every desk and Trade_flow_No. user can insert multiple Loading Port, Discharge Port and BL Date.

Loading Port: It is the region from where the goods get loaded and Data is coming from the Port Master. It is a mandatory field.

Discharge Port: It is the destination where the goods will be kept, and Data is coming from the Port Master. It is a mandatory field.

BL Date: It is the date on which the bill is generated. This is a mandatory field.

Goods: Goods are the commodities used in the trades and this field is coming from the Goods master. It is a Mandatory field.

Quantity: It represents the quantity of goods and is measured in MT (Metric tons). It is a mandatory field and allows upto 7 digits and decimal values.

Created By: It represents the name of the user who has created the trade flow.

Note:

Do not delete Trade Flow Record(s) if it is used anywhere in the application.

On clicking the **Print button**, user can print all the records for all Trade Flow Numbers.

Create Trade

Purpose: Trade contains the information - trade date, counter party, Trade Flow No etc. Without the trade flow creation, the trade cannot be created.

CFS Ref. No.: Against every trade a unique CFS Ref. No. is generated. It is an auto generated no.

Search: Select the CFS Ref No. which is already in the system from the dropdown and click the search button. Result shows the origination section based on selected CFS NO.

It has five sections:

Operation
Accounting
Reports
Documentation
Ex MM
Masters
Audit
User Security

Old trade entry:

Purpose: The function of the "old trade entry" is that the user can enter the entire trade accounting records (of an old trade, that might not be present in the DB) manually, without having to create a separate contract string.

If the CFS string is created once, it cannot be updated. Not even in the contract string section. Contract string will throw an error: "It is an open trade".

6.2.1.1 Origination: After Click on left hand side box of origination section user can open the origination form for creating the trade. After saving origination details an CFS Ref No. will be generated.

It has following fields:

Trade Date: It is the date at which a company fixes a deal with Counterparty and this is a mandatory field.

Transaction: It specifies the mode of transaction, this is a dropdown field containing 3 options i.e. Bank, Agent/Broker and Corporate. This is a mandatory field.

Counterparty: This field is depending on the transaction field, if user does not select any transaction field then they cannot be able to select the counterparty field. It is a drop-down type and shows the option based on transaction mode and it is a mandatory field.

Risk country: It is the country to which the Counterparty belongs. This is the drop-down field and the data comes from the country master. It is a mandatory field.

Risk Issuer: Dropdown specifies the bank which issues LC on behalf of Counterparty.

Trade Flow: This is a drop-down field which is coming from Trade Flow transaction. This is a mandatory field. User can not modify it after saving the data.

Currency: It specifies the currency in which trade/deal is fixed. This is the drop-down field and the data comes from the currency master. It is a mandatory field.

Amount: Textbox specifies the amount corresponding to above Currency. It is a mandatory field.

Fx Rate: Textbox specifies the exchange rate w.r.t USD. It is a mandatory field. It is automatically filled on the behalf of selected currency.

Amount in USD: It is calculated automatically based on Amount and Fx Rate.

Instrument Type: It is a dropdown field and data comes from the Instrument master. This is a mandatory field.

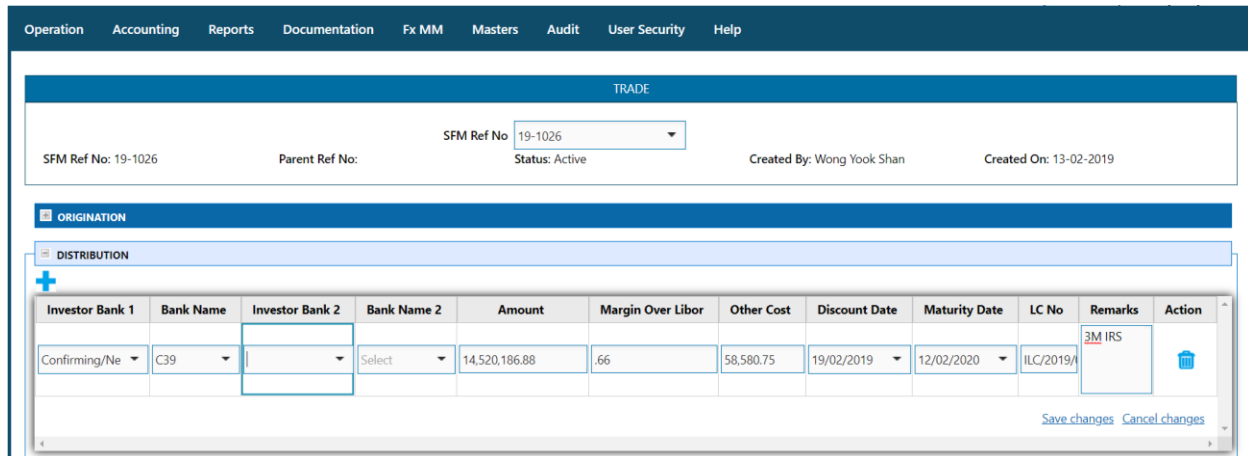

Transaction Type: Dropdown field and data comes from the Transaction master, it specifies the type of transaction and it is a mandatory field.

Transaction Sub Type: This field is depending on the transaction type field, if user cannot select the transaction type field then they cannot able to select the transaction subtype. It is a drop-down type and shows the option based on transaction type. It is a mandatory field.

Tenure (Days): Textbox specifies the number of days in which trade will be closed. By default, it is 9 months or 270 days.

Comments: Textbox is for adding remarks.

6.2.1.2 Distribution: After Click on left hand side box of distribution section user can open this section. This section is depending on the origination section. The user can insert record in distribution section after creating origination section.

The screenshot shows the RENSOL system interface. At the top is a navigation bar with tabs: Operation, Accounting, Reports, Documentation, Fx MM, Masters, Audit, User Security, and Help. Below this is a 'TRADE' section with a header bar. Under the header, there are fields for 'SFM Ref No: 19-1026', 'Parent Ref No:', 'Status: Active', 'Created By: Wong Yook Shan', and 'Created On: 13-02-2019'. Below the header is a tabbed interface with 'ORIGINATION' and 'DISTRIBUTION' tabs. The 'DISTRIBUTION' tab is active, showing a table with the following columns: Investor Bank 1, Bank Name, Investor Bank 2, Bank Name 2, Amount, Margin Over Libor, Other Cost, Discount Date, Maturity Date, LC No, Remarks, and Action. The table contains one row with the following data: Investor Bank 1: Confirming/Ne, Bank Name: C39, Investor Bank 2: (empty), Bank Name 2: Select, Amount: 14,520,186.88, Margin Over Libor: .66, Other Cost: 58,580.75, Discount Date: 19/02/2019, Maturity Date: 12/02/2020, LC No: ILC/2019/, Remarks: 3M IRS, and Action: (trash icon). At the bottom right of the table are links for 'Save changes' and 'Cancel changes'.

It has following fields:

Investor Bank 1: It is a drop down that specifies the type of investor bank. It is a mandatory field.

Bank Name: Dropdown specifies the actual bank playing the corresponding role of Investor bank. It is populated with the list of banks. This is a mandatory field.

Investor Bank 2: It is a drop down that specifies the type of second investor bank.

Bank Name 2: Dropdown specifies the actual bank playing the corresponding role of second Investor bank. Populated with the list of banks.

Amount: Textbox allows user to enter the amount to be discounted or collected from various bank.

Margin over Libor: Textbox allows user to enter the corresponding amount for margin.

Other Cost: Textbox allows user to specify miscellaneous cost.

Discount Date: Textbox specifies the date on which LC will be considered for discounting.

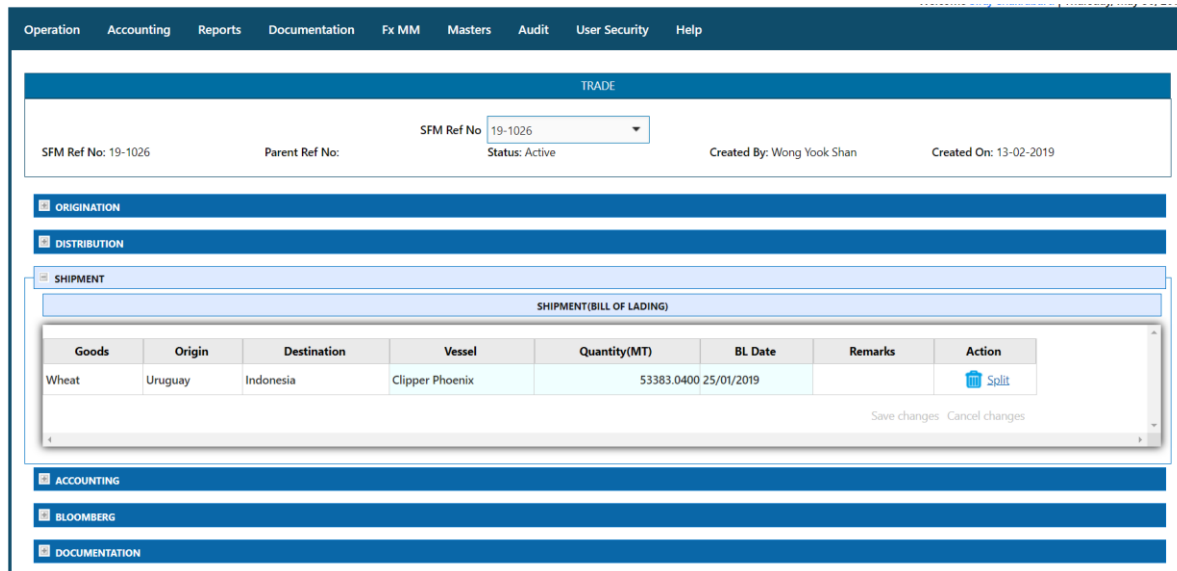

Maturity Date: Textbox specifies the date on which LC will be mature.

LC No.: Textbox specifies the LC number.

Remarks: Textbox is for adding remarks.

6.2.1.3 Shipment: After Click on left hand side box of Shipment section user can open this section.

This section contains the information about the vessel, goods and their quantity which is ready for shipping. Users do not need to insert record in this section, it is automatically populated based on selected Trade flow No in Origination. But users can modify and delete the shipment data.

Goods	Origin	Destination	Vessel	Quantity(MT)	BL Date	Remarks	Action
Wheat	Uruguay	Indonesia	Clipper Phoenix	53383.0400	25/01/2019		Split

It has following fields:

Goods: Textbox allows user to modify Goods name used in the trades.

Origin: Dropdown specifies the origin country.

Destination: Dropdown specifies the destination country.

Vessel: Textbox will be used to capture the Vessel name.

Quantity (MT): It represents the quantity of goods.

BL Date: It is the date on which the bill is generated.

Remarks: Textbox is for adding remarks.

6.2.1.4 Split Shipment: The shipment detail for each goods can be split (divided) into multiple goods based on the quantity. E.g. if the quantity of corn is 10 MT – we can split the record for Corn into two records with quantities of 5 MT each or into three records for Corn with quantities of 3 MT, 3 MT, 4 MT. Hence, we can split the record into multiple numbers based on its total quantity. It is to be noted that the sub-total quantity of all the records that have been split cannot exceed the total quantity.

X

Note:

We can only use split feature before contract string is generated.

We can only edit the shipment details from Split Shipment Pop-Up.

6.2.1.5 Accounting: After Click on left hand side box of Accounting section user can open this section. The Accounting Section is for specifying Income & Cost sections related to a trade. This section contains the two sub-section Profit-&-Loss and Balance sheet section.

Note:

Entries of Accounting section depends on the **Contract String** form fields. if user can not fill the Contract String then they will not be able to fill the Accounting section.

(Refer to 6.7 Trade Accounting for detail)

6.2.1.6 Documentation: The Documentation Section is for uploading documents associated with a transaction/trade. There is an option to delete document(s) if uploaded mistakenly. Documents related to a specific transaction can also be searched.

+ Contract + Invoice + Dr/Cr Note

Submit By Ops

Note –

Swapping of entities is an additional feature whereby we can switch positions of entities in the contract string. We can do this only before finalizing the invoice.

To execute swapping we must select one of the entity names from the counter party dropdown in one entity block/column and select the entity name we removed from the previous column in the other entity

block/column where we want to replace/swap our entity (position). Afterwards we must click on *Update* button to save the change.

Swapping cannot occur after invoice has been finalized.

After swapping entities the quantities for each of the goods in the invoice will be initialized back to zero. The same will happen if we change an entity and bring back that entity in future.

It has following fields:

CFS Ref No: It is a dropdown that selects any one CFS Ref no for creating contract string. This is a mandatory field.

Counter Party: Entity Name

Currency: Dropdown field specifies the currency name which comes from the currency master.

Goods: This field is automatically filled based on the Goods from shipment section.

Vessel: Vessel Name

Quantity: This field is automatically filled based on the Goods from shipment section.

Unit Price: Price for per unit quantity is entered by the user. It is a mandatory field.

Sub-amount: It is the product of quantity and unit price.

Loading: It is the region from where the goods get loaded and this field is automatically based on the type of Goods selected in Goods field.

Destination: destination where the goods will be kept, and this field is automatically filled based on the type of Goods selected in the Goods field.

Due Date:

Total Amount: It is calculated based on Unit Price multiplied by quantity.

Shipment: It is the date field which shows current date by default.

Delivery: By default, it shows CFR if user wants to change it, they can.

Note-

- ❖ Every entity block contains three buttons Contract, Invoice and Debit/Credit which are used for creating Contracts, invoices and Debit/Credit respectively.
- ❖ Another button is “Finalize By Ops”. If Invoice is not created, then this button will be disabled. Once invoice is created, this button will get enabled and if Singapore Op. Team clicks on this button, a system generated auto-notification mail will be send to respective entity along with invoice as attachment.

Actions:

Submit/Update: After click on submit button contract string is created for the CFS REF No.

Add Entity: If user clicks the add button then one block is created with contract string fields. Maximum 6 blocks can be added here.

Contract: If user clicks the contract button, then two contracts are generated one for sale and one for purchase.

Invoice: If user clicks the invoice button for a particular entity then one invoice will be generated, and four entries will be created, two entries for **Profit-&Loss (Income and Cost segment)** and two entries for **Balance Sheet** (in the **Receivable and Payable** section).

INVOICES

Page 1 of 11 (160 items) 1 2 3 4 5 6 7 ... 9 10 11 Page size: 15

Actions:

Void contract button: Clicking on this button voids/deletes the entire contract no. (sales/purchase) that is created in contract string.

Search By Contract: By clicking on “search by contract” we can display the contract string based on its respective contract no. (sales/purchase).

The dialog box titled "Search By Contract No" contains a text input field labeled "Contract No" with the value "S054600059". Below the input field is a button labeled "Show Contract String".

Actions:

Show Contract String: By clicking this button we can access the contract string based on the contract no. (sales/purchase) that is selected from the contract no. dropdown.

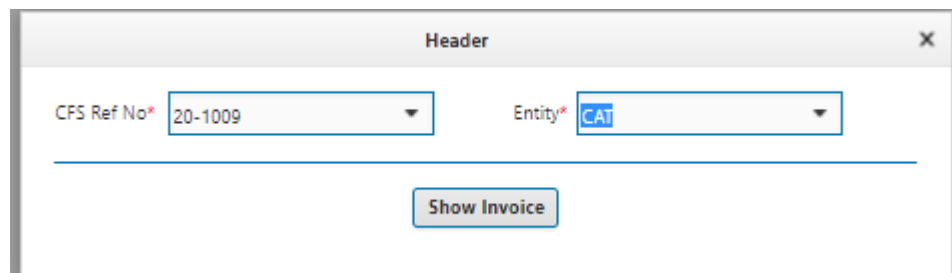

Note:

We can access and utilize the contract string in the same manner from search-by-contracts as we can in contract string.

When we add/remove a new trade flow in the origination section within trade accounting then the new trade flow data is updated in the shipment section as well as in the contract string a new block will be added/removed and if added then the unit price will be zero.

7.5 Invoice

Create Invoice: To create new invoice or update existing invoice before finalization.

It has following fields:

CFS Ref No: Select the CFS Ref No. from the dropdown for viewing the invoice of a particular entity.

Entity: This is the dropdown field and data are bound based on selected CFS Ref No. It shows only entities for which invoice is to be generated.

Action:

Show Invoice: by clicking the show-invoice button we can access the page with all the invoice records (Submitted By Ops, finalized & not finalized) for the entity involved in a particular trade.

Note:

We can also create **partial invoices** from **Create-Invoice** but the only difference between generating invoice/partial invoice from Create-Invoice and Contract String is that the user must enter the CFS no. in the former.

Action:

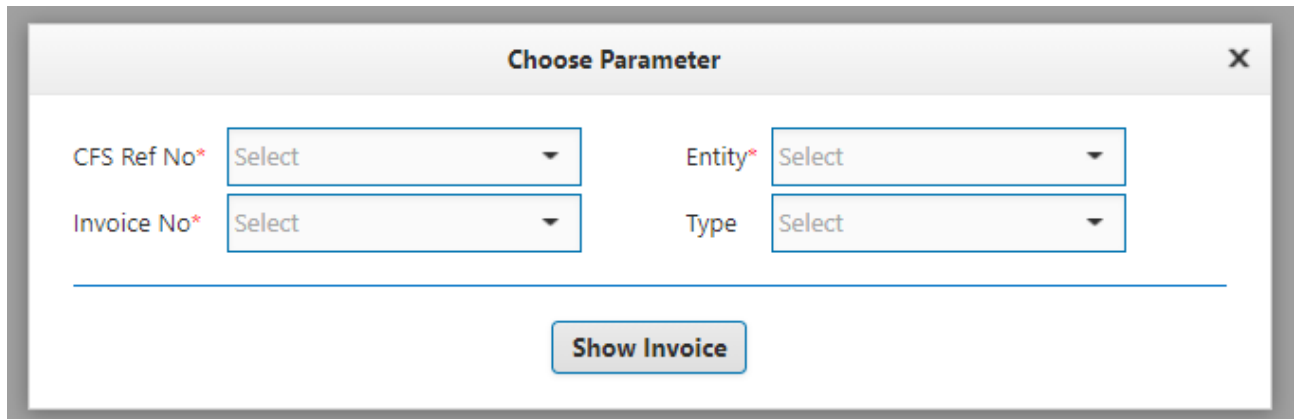

Update: By clicking the update button we can edit and update the unfinalized invoices.

Note:

To finalize an invoice for a specific entity we must tick the checkbox under action and then click on finalize to send the invoice for accounting.

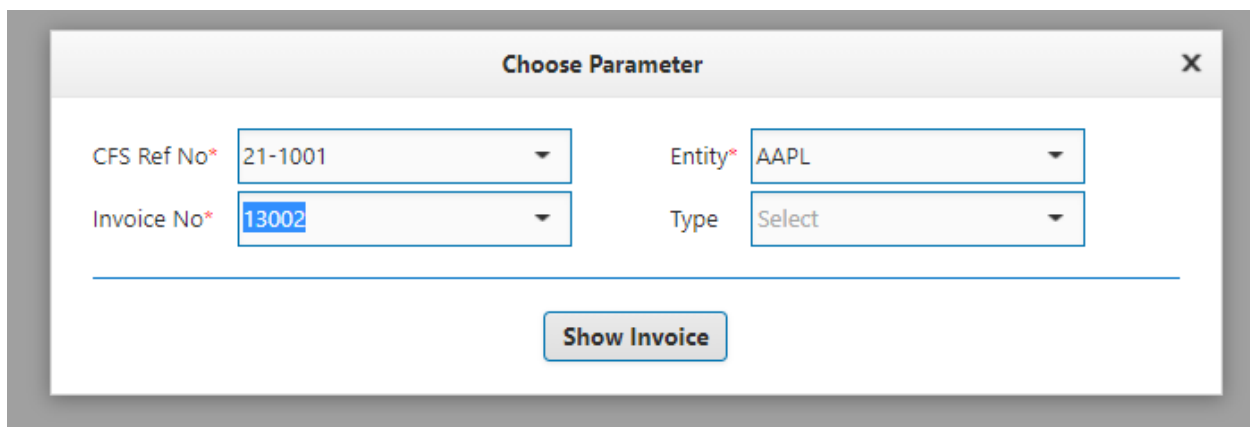

View Invoice:

Purpose: It is used to view the invoice for the particular entity which is generated in contract string section.

User needs to enter the mandatory fields in sequence.

1. CSF Ref No. will be listed in the drop down based on logged in user's entity. and if the Trade contains the respective counterparty of the Logged in user in the contract string.
2. Entity name (buy & sell entities will be listed) and user needs to select the required entity.
3. The invoice numbers will be listed depending on selected entity & CFS No. and user needs to select the required invoice number.
4. Type is optional. User can select either Bank or Internal (by default it is Internal).
5. Then click on Show Invoice. The invoice will get display on the screen.

Sample Invoice Format (which will be displayed on the screen) and can be printed or download by clicking on the respective icon which are there at the top:

Income & Cost Segment: The Purchase will be entered in Cost segment and Sale will be entered in Income segment.

It has following fields:

Account Status: Label displays corresponding line item for purchase or sales as **Open** until the trade settles. When the trade is settled then the status will be **Closed**.

Goods: Dropdown specifies users to Choose Goods name used in the trades.

Booking Entity: Dropdown displays list of Legal Entities which are used in contract string and entities depend on the selection of goods type.

Publish Status: Label displays 'Posted' if the entry is already posted on SUN. If it is Posting, then the status will be 'Posting' and If not posted then status will be 'Not Posted'.

Posting Date: The date on which the entry will be posted on SUN.

Company SAP Account: This field is filled automatically based on selected booking entity.

SAP PNL Account: Dropdown displays the PNL Account No. corresponding to Sale or Purchase.

SAP PNL Code: Dropdown displays the PNL Code corresponding to Sale or Purchase.

(SAP PNL Account and SAP PNL Code are both interrelated fields).

Interco. Entity: It is the third-party Name depending on the selected legal entity.

Interco. Code: It is the third-party code depending on the selected legal entity.

Country: Dropdown specifies the Country to which the Legal Entity belongs.

Currency: Dropdown specifies the currency which is involved in the trade.

Fx Rate: Label displays FX rate which is coming from the CSIL system.

SAP Fx Rate: Label displays the SAP Account No. based on Company and Chart of Accounts.
(Fx Rate and SAP Fx Rate both depend on the Currency).

Amount: Textbox specifies the amount corresponding to above Currency.

Amount (USD): It is calculated based on Amount divided by Fx Rate.

Assignment No.: It displays the Assignment No. corresponding to line item for purchase or sales.

Profit Centre: Dropdown specifies PGU name based on selected legal entity.

Text: Textbox captures remark such as CFS 15_140001-NBV-CAT-TGS-AAPL-NBV (or) CFS15-140001-LC charges.

Note: All fields are mandatory.

Actions:

Delete: Delete the row.

Select: Selects the row for SUN Posting.

Reverse Entry: If you want to reverse the posted entry from the income segment then one entry is added in cost segment of Balance and Profit-&-Loss section.

Post: Open Popup Box for Posting.

Account Posting:

It has following fields:

Accounting Period: It is showing the month and year of the current accounting period.

Account Code: It is showing the PNL account code.

PGU: It is showing the PGU name.

Sub Product:

Counter Party: It shows the counter party which is involved in the trade.

Contract Number: It shows the contract no. which belongs to a legal entity.

Load Port: It is the region from where the goods get loaded.

Discharge Port: It is the destination where the goods will be kept.

Business Location Code: It specifies the location.

Tax Code: specify the Tax code.

Base Amount: It is showing the USD amount.

Reporting Amount: It is showing the USD amount.

Currency Code: It specifies the currency code which is involved in the trade.

Debit Credit: It is showing entry is for Debit or Credit.

Posting Date: The date on which the entry was posted to SUN.

Journal Type: It specifies the type of journal.

Transaction Amount: It specifies the amount of transaction.

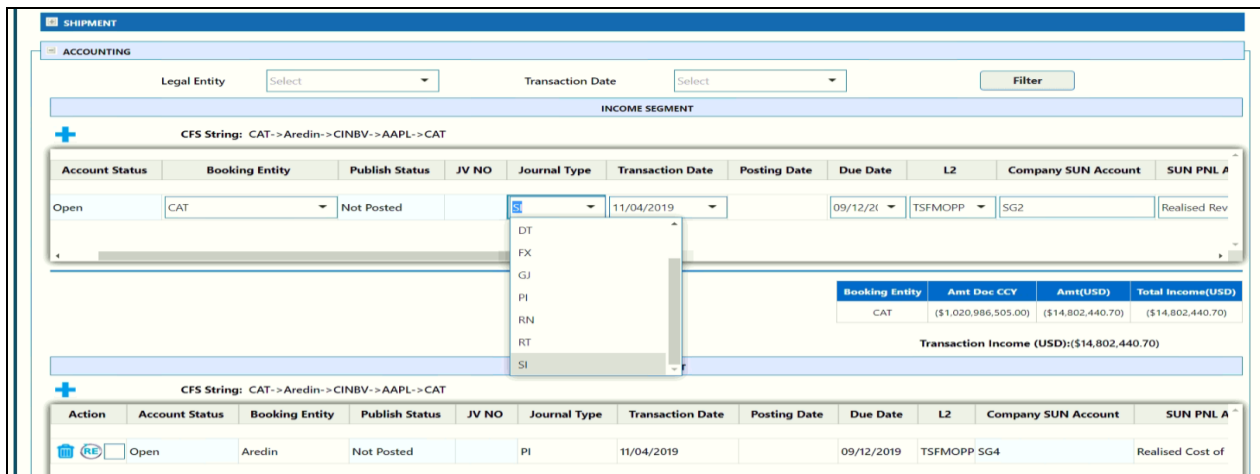

Transaction Date: It specifies the date of transaction.

Transaction Reference: It specifies the transaction reference.

Actions:

Manual Post: If user select the Manual Post then they must enter the JVM Number.

Sun Post: If user select the Sun Post then they do not need to enter the JVM Number.

Reverse Posting:

Re button: If we commit a mistake by sending a wrong record for invoice or debit/credit note then by ticking the checkbox and then clicking the RE button (within the cost/income segment inside trade-accounting section), we can **repost** the record into sun posting in order to **nullify** (balance) the record(s).

8.1 Bloomberg

8.1.1 Bloomberg Data

Purpose: The user can access the Bloomberg Data by entering the maturity date and the legal entity. All the trade data from Bloomberg are stored in the CFS database and can be viewed under the Bloomberg Data Uploads. The data records from the database can be filtered by the year and month dropdowns and user can then view all the records for that time span. Additionally, we can filter our results from each of the column headers in the table.

9 Audit

9.1 User Access report

Purpose: The User Access Report is used to collect the information about what forms a specific user has access to and at what date & time the user has last accessed the form(s) and what action has been taken by the user. The data to be displayed on the report can be filtered according to the user parameter. This UAR will be accessible by CFS Country Controller & CFS Global Controller provided access have been granted in User Access Role module

Action:-

8. From Date

9. To Date

10. All Usernames will be listed in the drop down based on logged in user's entity.

Once user clicks on Submit button if entering the required values, the below screen will get display

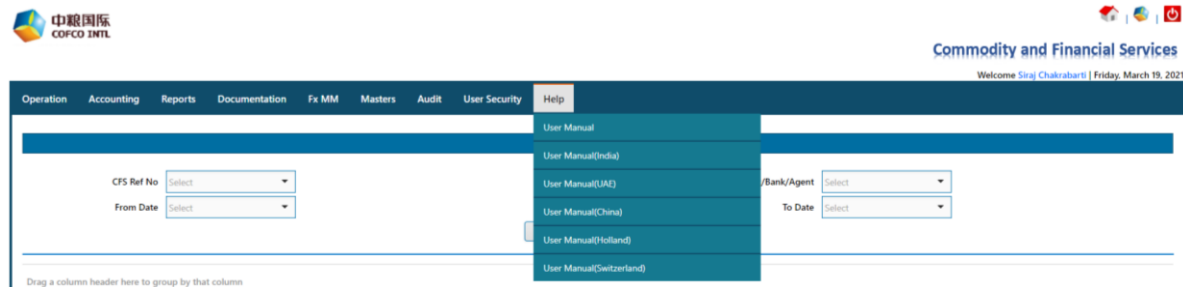

The screenshot displays the 'User Access Report' interface. At the top, there's a header 'USER ACCESS REPORT'. Below it, a navigation bar shows '1 of 3' and various icons. The main content area is titled 'User Access Report' and includes a 'Selection Criteria' section with filters for Country (Singapore), User (Siraj Chakrabarti), and Report run Date & Time (21/08/2020 04:57 PM). A table lists user activities with columns: Country, User Name, Serial No, Form Name, Date & Time, and Action Taken. The table shows 11 entries for Siraj Chakrabarti, including 'Open Trade' and 'User Role' forms. On the right, a 'PREVIEW PARAMETERS' sidebar allows filtering by From (7/21/2020, 4:53 PM), To (8/21/2020, 4:53 PM), Country (Singapore), and User (Siraj Chakrabarti), with 'RESET' and 'SUBMIT' buttons.

Country	User Name	Serial No	Form Name	Date & Time	Action Taken
